

≡ A GUIDE TO PLANTING BY THE SIGNS ≡

MOON PHASES	WHAT'S GOING ON	WHAT'S TO PLANT
 <p>NEW MOON (no moon)</p>	<p>Increase in lunar gravity helps seeds germinate. Start planting above-ground crops that produce seeds outside the fruit.</p>	<p>Plant above-ground annuals with outside seeds: lettuce, spinach, celery, broccoli, cabbage, and cauliflower.</p>
 <p>SECOND QUARTER</p>	<p>Less lunar gravity and more moonlight. Strong leaf growth; a good time to plant is two days before full moon.</p> 	<p>Plant above-ground annuals with seeds inside: beans, melons, peas, squash, peppers, and tomatoes.</p>
 <p>FULL MOON</p>	<p>High lunar gravity; moisture being pulled toward the surface of the soil; high tides. Good time for transplanting and pruning.</p> 	<p>Plant root crops such as potatoes, onions, peanuts, bulbs, beets and carrots.</p> 
 <p>FOURTH QUARTER</p>	<p>Less lunar gravity and moonlight. A good general rule is not to plant anything.</p> 	<p>Cultivate, prune, transplant and harvest. Mow the lawn; remove weeds, briars, and poison ivy.</p>
